SEPTEMBER 2016 UPDATE
TOWN OF CAMILLUS WATER PUMP STATIONS

OCWA is always looking for ways to enhance and maintain its facilities that deliver potable water to all areas of OCWA's water distribution system. The work that has recently been completed on the two pump stations pictured below will serve the Camillus Consolidated Water District and the surrounding areas with the reliable delivery of quality water from its Otisco Lake Water Treatment Plant. Additionally, to assist with the efficient distribution of water, new larger pipelines were installed in conjunction with this project.

SHERWOOD AVENUE WATER PUMP STATION

In December 2015, work on the Sherwood Ave. pump station replacement began. The pump station became operational in July 2016.

Newly Completed Sherwood Pump Station Replacement

HINSDALE ROAD WATER PUMP STATION

In April 2015, OCWA began constructing a new potable water pump station on the west side of Hinsdale Road on the same site as our Fairmount Reservoirs and Work Center. The new pump station became operational in November 2015.

Completed Hinsdale Pump Station

Questions or concerns on either of these projects can be addressed to OCWA contact Deb Owens at 315-455-7061 x 3131, or dowens@ocwa.org, or at the address above.
