

FAIRMOUNT RESERVOIR AND WORK CENTER
313 HINSDALE ROAD, TOWN OF CAMILLUS
JUNE 2022

Since the groundbreaking in April of 2021, the Contractor at our Fairmount Reservoir facility has completed the first of two new concrete water storage tanks. The new 6MG East Tank officially went into service on January 14th, 2022 and is operating well. During the winter, the Contractor demolished the existing steel tank and processed the material into manageable pieces for removal from the site and recycling.

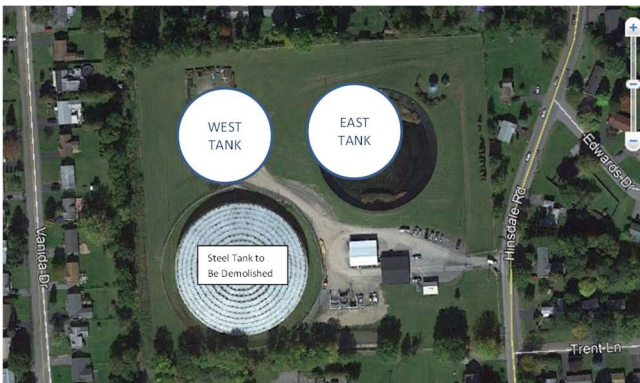

Work has now moved towards the West Tank and involves a significant amount of preparation for the foundation. The site contractor has been moving soil and stone to prepare for the floor of the second tank and for final grading of those areas where work has been completed. The floor of the West Tank was cast on June 25th marking a major progress milestone.

New East Tank in Operation – 6 Million Gallons

Preparation is ongoing for the West Tank foundation and floor.
